SUMMARY

Full-stack engineer, 8 years, shipping LLM-assisted product features with evaluation discipline at a logistics SaaS. Strongest where a feature spans the data model, the API, and the UI.

CORE SKILLS

Languages	TypeScript, Python, SQL
Frontend	React, SvelteKit
Backend	FastAPI, PostgreSQL, Redis, AWS
AI	LLM feature development, offline evaluation, prompt design

EXPERIENCE

Corvid Systems, B2B logistics SaaS, ~300 people

Chicago, IL (hybrid)

Senior Software Engineer (2022-03 to Present)

- Shipped an LLM-assisted exception triage feature that cut average shipment-exception resolution time from 41 minutes to 12, gated on an offline evaluation set of 500 labeled historical exceptions.
- Built the internal support console used daily by 200+ operations agents: React/TypeScript front end over a Python API, replacing three spreadsheet workflows.
- Led the billing data-model refactor that unblocked usage-based pricing; migrated 4 years of invoice history with zero reconciliation discrepancies.
- Mentor two mid-level engineers; run the team's design-review rotation.

Bluejay Health, appointment scheduling for independent clinics

Remote

Software Engineer (2018-06 to 2022-02)

- Took the clinic self-scheduling flow from prototype to production across 900 clinics, including calendar-sync integrations with two EHR vendors.
- Cut pager volume roughly in half in one quarter by adding idempotent retries and dead-letter handling to the reminder pipeline.

RecipeBox Open-source meal-planning web app (SvelteKit + SQLite) with 300 GitHub stars.

Education B.S. Computer Science, University of Illinois Chicago, 2014-2018
